

How YOU Can Help Prevent More Bird Extinction:

1. Plant native plants in your yard. Even small native gardens help reverse the loss of urban biodiversity.
2. Set up bird feeders and bird baths in your yard. Plus, birds are fun to watch!
3. Keep cats indoors. Every year domestic cats kill up to 3.7 billion birds.
4. Cut back on plastic use. Plastic often ends up the ocean killing hundreds of thousands of seabirds, turtles and marine mammals each year.
5. Forgo pesticides. It is estimated that agricultural use kills 67 million birds each year.
